## 1. ANDROID IMPLEMENTATION

The android app has been created in Android Studio.

### MainActivity.java

```
package com.example.upcmanager;

import androidx.appcompat.app.ActionBar;
import androidx.appcompat.app.AppCompatActivity;

import android.content.Intent;
import android.os.AsyncTask;
import android.os.Bundle;
import android.view.View;
import android.widget.EditText;
import android.widget.TextView;

import org.json.JSONArray;
import org.json.JSONException;

import java.io.BufferedReader;
import java.io.InputStreamReader;
import java.net.HttpURLConnection;
import java.net.URL;

public class MainActivity extends AppCompatActivity {

    private String query, ipAdress;
    private Intent intent;
    private TextView wrongMessage;

    @Override
    protected void onCreate(Bundle savedInstanceState) {
        super.onCreate(savedInstanceState);
        setContentView(R.layout.activity_main);
        getSupportActionBar().hide();
    }

    // La cridem quan apretem el botó Login
    public void Login(View view) {
        // Do something in response to button
        intent = new Intent(this, DisplayLoginActivity.class);

        EditText userName = (EditText) findViewById(R.id.userName);
        String name = userName.getText().toString();
        intent.putExtra("UPC_NAME", name);

        EditText userUid = (EditText) findViewById(R.id.userUid);
        String uid = userUid.getText().toString();

        EditText ip = (EditText) findViewById(R.id.ip);
        ipAdress = ip.getText().toString();
        intent.putExtra("ipAdress", ipAdress);
    }
}
```

Document: [EXTRA_REPORT.doc]	<p align="center"><b>Extra Report</b></p> <p align="center"><b>TELECOM PI</b></p>	
Date: 10/01/2021		
Rev: 01		
Page 2 of 18		

```

wrongMessage = findViewById(R.id.wrongMessage);

query = "students?student_id=" + uid + "&name=" + name;

UserLoginTask mAuthTask = new UserLoginTask();
mAuthTask.execute();
}

class UserLoginTask extends AsyncTask<String, String, String> {

    @Override
    protected void onPreExecute() {
    }

    @Override
    protected String doInBackground(String... params) {
        String res = "";
        try {
            URL url = new URL("http://" + ipAdress + "/" + query);
            HttpURLConnection con = (HttpURLConnection) url.openConnection();
            con.setRequestMethod("GET");
            BufferedReader in = new BufferedReader(
                new InputStreamReader(con.getInputStream()));
            String inputLine;
            StringBuffer response = new StringBuffer();
            while ((inputLine = in.readLine()) != null) {
                response.append(inputLine);
            }
            res = response.toString();

        } catch (Exception e) {
            e.printStackTrace();
        }
        return res;
    }

    @Override
    protected void onPostExecute(String res) {
        if (res.contains("name")) {
            wrongMessage.setText("");
            startActivity(intent);
        }
        else
            wrongMessage.setText("Name or uid not correct. Try again.");
    }
}
}

```

## activity\_main.xml

        <!-- Status bar color. -->
        <item name="android:statusBarColor"
tools:targetApi="1">?attr/colorPrimaryVariant</item>
        <!-- Customize your theme here. -->
    </style>
</resources>
```

### network\_security\_config.xml

```
<?xml version="1.0" encoding="utf-8"?>
<network-security-config>
    <base-config cleartextTrafficPermitted="true" />
    <domain-config cleartextTrafficPermitted="true">
        <domain includeSubdomains="true">192.168.1.79</domain>
    </domain-config>
</network-security-config>
```

### Changes in servidor.php

From

```
$result = mysqli_query($conn, "SELECT name FROM students WHERE student_id = '$student_id'");
```

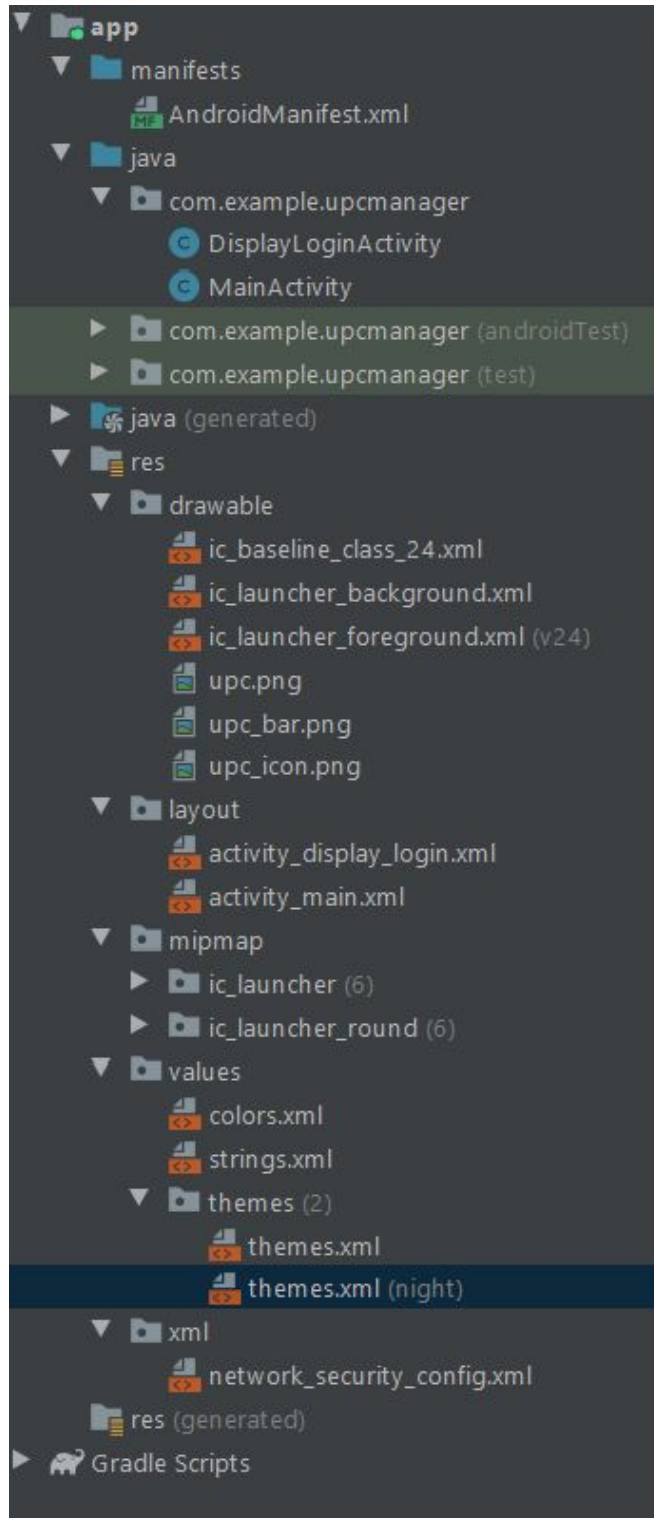

To

```
if ($name!=NULL){
    $result = mysqli_query($conn, "SELECT name FROM students WHERE student_id = '$student_id' and name = '$name'");
} else {
    $result = mysqli_query($conn, "SELECT name FROM students WHERE student_id = '$student_id'");
}
```

This is to make the android app work.
